STOCK OF GOLD ROAD BONANZA A SPECULATION

Promoters Claim Mine Has Excellent Prospects, and Have Good Connections

Following the appearance in the local press of large display advertisements offering for sale Arizona mining stock, inquiries were received relative to the merits of the proposition and the Star-Bulletin sent a representative to the local office of A. E. White Company of San Francisco, the house of Gold Road Bonanza stock. At this office all questions were quickly and willingly answered.

The local representative of the A. E. White Company states that the property of the Gold Road Bonanza company is directly adjacent to and above the property of the Gold Roads mining company. The latter is a proven property, a large producer and a dividend-payer owned by Guggenheim interests. As the Bonanza is above the older property it may be necessary to go deeper before ore is encountered. It is not claimed that the Gold Roads Bonanza is a proven mine but it is claimed that it owns 90 acres of well-located mineral lands, has equipment on the ground in operation and is working three shafts, and the shaft that is putting down at the rate of 5 feet per day, is only 400 feet from a shaft of the Gold Roads company. In other words, it is claimed to be an excellent prospect. The vice-president is the mine superintendent of the older property and it would thus appear that he has confidence in the new company. It was further stated that the company has received the approval of the Arizona state corporation commission, necessary before stock in an Arizona incorporation can be marketed and is listed on the San Francisco stock exchange.

The Oatman district in Arizona is not new but much of its development is recent. For years there were two successful mining companies there, the Gold Roads and the Tom Reed. Within two years several other properties have passed from the prospect stage into the mine stage.

The deposit is said to be a blanket formation and it is claimed that most of the properties located and developing will find such deposit. Its depth is undetermined but the Gold Roads is in it still at a depth of 1100 feet.

Arizona has a "blue sky law" which makes it necessary to satisfy the corporation commission of the legitimacy and honesty of a proposition before the corporation may sell stock. Then it remains for the purchasers of the stock to see that their money goes into the ground in development work, is properly expended.

A dividend-paying mining stock brings a good price. It is while the property is developing from prospect to mine that its stock can be obtained at low figures. In other words there are chances for and against to be weighed. It is purely and simply a speculation and cannot be properly termed an investment until the property reaches the producing stage. The president of the United Verde extension, which had a phenomenal rise from 25 cents to \$25, advised that no poor man put his savings in mining stock and that no one put more than half his savings in the stock of unproved mining companies.

WHAT DOCTORS USE FOR ECZEMA

A soothing combination of oil of Wintergreen, Thymol, and other healing ingredients called D. D. D. Prescription is now a favorite remedy of skin specialists for all skin diseases. It penetrates the pores, gives instant relief from the most distressing itch. Its soothing oils quickly heal the inflamed tissues.

Test its soothing effect. Come and let us tell you about our money back guarantee offer to free you from your distress. Ask also about D. D. D. Soap.

Eyes Examined

Greater advancement has been made in the optician's business than in any other. A few years since, spectacles were handed over the counter like ordinary merchandise, but today the services of a fully qualified optician are essential in order to determine—by a scientific examination of each eye—what are the correct glasses.
